# LET'S TALK WOOD PREPARATION & STORAGE

Did you know burning green wood can severely damage your woodburning stove and cause residue build-up in your chimney? Green wood (or freshly cut wood) releases a lot of creosote (tar). It will burn, but it won't burn well, and if done regularly can cause a chimney fire or worse. Green wood is safe for outdoor use, but seasoned wood is best for the most efficient and clean burn indoors.

Seasoning is the process of allowing wood to dry over a period of time (usually six months) depending on climate, and type and age of the tree. Although some wood may require less time, six months is considered a reasonable amount of time for the moisture content to drop from 50 per cent to 20 per cent or less.

Once you have selected the correct seasoned wood for maximum woodburning efficiency, consider which species of wood is best for heating your home. Hardwoods (maple, walnut, oak) were traditionally the preferred burn choice because leaky cast iron stoves wouldn't maintain a fire made of softwoods (cedar, red pine, fir) overnight. However, with the latest advancements in technology, woodburning appliances all function well with a wider variety of wood species, due to their better control over the combustion process. In modern stoves, both soft and hardwoods make excellent fuel for spring and fall use, but it's still best to save your hardwoods for the coldest part of winter. Also, consider burning fruit trees, such as apple or cherry, as they produce a pleasing aroma, and do well heating your home too.

Want to save time and energy? Buying pre-cut wood is a great way to go, but it is important to know what you are getting. Check with the seller to see what types of wood are included and be clear on how much wood you will receive. Don't forget to determine the appropriate log dimensions so they fit inside your stove. It is good practice to visit the woodlot and inspect the wood before purchasing.

The official measurement of firewood is a "cord". A "full cord" is four feet tall by four feet deep by eight feet long. Depending on the log size (commonly sixteen to eighteen inches), a "face cord" may only offer a third the firewood as a full cord, and should be priced accordingly. Firewood is also sometimes sold by the amount that fits in a truck bed; this can make the amount of wood difficult to gauge and can conceal a higher price per cord measure.

The amount of wood you need depends on climate, length of seasons, size of your home, and whether or not your appliance is the primary heating source. In theory, a cord of wood could last you four months in a smaller home with conservative use and moderate winter temperatures. However, it is better to err on the side of caution and overestimate the amount of firewood needed, so you aren't left out in the cold. Always source a couple of woodlots to keep your options open. A cord most likely will only last you two months.

Once your wood has been delivered, or you've just finished splitting your own wood (the most inexpensive firewood source), it now needs to be stacked and stored properly.

Stack wood near the entrance to your home, but not against the wall, as this prevents insect and critter problems. Construct an open shed or use a tarp to shield wood from rain and elements. Keep your wood raised three to four inches off of a solid base or the ground to prevent the bottom rows from rotting. Pallet boards work very well for this purpose. Whatever you use, keep in mind there needs to be room for good air circulation all around the stack to aid in seasoning, and protection from the elements year-round. If you split your own wood, the storage area should ideally be sized to hold a three-year supply, to allow for proper seasoning and rotation.

Thank you to **woodheat.org** for the above information. **woodheat.org** is a great source for information on heating your home with wood.

## Don't Burn Garbage!

Some might think it's better to burn garbage rather than bury it in a landfill, but that's not the case.

Never burn garbage in your wood stove, your fireplace or a barrel in your yard. These devices are not incinerators.

Food packaging is one of the biggest sources of household waste. A good way to reduce your waste production is to avoid buying overpackaged products. Most papers and plastics can be recycled. Recycling is more environmentally friendly than burning because it does not pollute the air and is the raw material for many new products.

Unlike natural wood, garbage contains a wide range of materials and products that cause damage to the inside walls of your appliance and chimney. Most manufacturers specify that the warranty on your woodburning appliance will no longer be valid if damage is caused by burning garbage or other material which is prohibited. Check your owner's manual but this will likely include treated or painted wood, driftwood, coal, garbage or plastic.

Burning garbage does not destroy the chemicals it contains, quite the opposite. Burning changes the chemicals, causing unpredictable and harmful chemical reactions. Dioxins are just one of the many pollutants produced by burning garbage. These highly toxic carcinogens do not decompose; they are bio-accumulative. Airborne dioxins are deposited on the ground, in water and on vegetation, and can be ingested by animals and fish. Burning garbage at home or in the cottage is the fifth largest source of dioxin in Canada.

Even paper burning can be risky due to chemical contamination. Always remember that diapers, cardboard, cardboard boxes and magazines usually contain plastics, additives and dyes.

In short, only burn firewood and recycle plastic and paper.

# MEMORIES ARE MADE WITH NAPOLEON

FIREPLACES | GRILLS | HVAC

Napoleon, a family owned company, has been providing home comfort for over 40 years and has grown to be industry leaders in design and innovation throughout North America and Europe. We pride ourselves in the highest quality manufacturing and customer care with our customers at the heart of everything we do, from the finest grills and fireplaces to a full line of heating and cooling products.

Napoleon enhances the most memorable moments in your home.

# TOP REASONS TO INSTALL OR UPGRADE A FIREPLACE

When it comes to adding ambiance, there is nothing better than a fireplace. Whether woodburning, gas or electric, a hearth appliance not only increases your home's value but can lower your monthly heating costs, all while creating a comfortable, happy space for friends and family.

## INCREASED HOME VALUE

According to real estate professionals, one of the most desirable features for homebuyers is a fireplace, and having one could add 6-12% to your listing price. A recently updated fireplace can add value to your home when you're ready to sell, especially if it's a high efficiency appliance.

## AFFORDABILITY

It may come as a surprise, but a hearth appliance can provide an efficient space heating option that won't break the bank. The cost of upgrading a fireplace varies but can be quite an affordable option when considering improvements to your home. It can also help you save money on heating costs by allowing you to heat the spaces where you and your family spend time together.

## AESTHETICS

No one can dispute the allure of a fireplace and the calming effect it can have, making your home an escape from your hectic life. A simple facelift and upgrade can dramatically update the look and efficiency of your existing fireplace.

## FAMILY TIME

With the popularity of mobile devices it isn't surprising our national average screen time is staggering and steadily climbing. The result is less quality time together. Creating a comfortable and calming family room centered around a hearth will mean more quality time with those you love.

If you think it is time to replace your hearth, visit a specialty hearth retailer to see what suits your style and budget, or check out manufacturer and local retailer websites.

# CHOOSING YOUR FIREPLACE

Looking for a wood or gas fireplace? If you are thinking about adding a hearth appliance to your home or replacing an existing appliance you will want to consider which appliance makes the most sense for your space and your lifestyle.

You will want your new fireplace to suit your décor, and there are many options when it comes to style, including contemporary and traditional looks. Woodburning and gas appliances both offer a variety of design elements to consider, such as linear and rectangular configurations, and see-through and three-or-four-sided bay fronts.

The type of appliance installation is also an important factor in choosing the right fireplace for you. There are three options available.

### BUILT-IN FIREPLACES

Even without a chimney, you can have a fireplace! The zero clearance fireplace allows you to place an appliance just about anywhere. This type of pre-fabricated fireplace is usually used in situations where there is no existing fireplace installation. You simply need a wall. Most zero clearance appliances are safe to install within inches of combustible material such as drywall and wood, and your qualified hearth specialist will direct you in to choosing the correct appliance for your situation. Depending on the location of the appliance and the fuel requirements, the exhaust pipe will exit directly through the wall or through the roof. Zero clearance wood or gas fireplaces offer excellent installation flexibility. Once you've chosen, have it installed by a qualified professional and finalize the decor to your taste.

### FIREPLACE INSERTS

A fireplace insert, or built-in fireplace, is a factory-built metal box that is designed to be installed in the existing cavity of a masonry or open fireplace. The insert turns your old, inefficient fireplace into an efficient, cleaner burning one, saving you money and providing much more effective heating. You'll find many options available in this category of appliance, including style and fuel options.

### FREE-STANDING STOVES

Traditionally, free-standing stoves tended to be relegated to the basement and were mainly used for heating. Today, the stove, whether wood, gas or pellet, has many advantages. Installation usually does not require much finishing work. Modern stoves are now much more beautiful, efficient, and cleaner burning than ever before. Indeed, the stove is back in fashion and manufacturers have designed exciting new stoves with great new looks. Stoves are now counted among high-end appliances and are popular with design professionals.

You can now distinguish between the three types of hearth appliances and make the best choice for your home. Visit a **HPBAC Specialty Hearth Retailer** to see all the wonderful possibilities or visit manufacturer and local retailer websites.

# WINTERIZING YOUR BARBECUE

Many of us enjoy grilling outdoors year round, but for some of us, the grilling season comes to an end when temperatures drop below freezing. If you don't plan to grill during the winter, we recommend "winterizing" your grill. Properly caring for it during the winter months will ensure your appliance will be in good working order next season.

## CLEANING THE GRILL

Apply non-stick spray on the grates before lighting the grill; the protective spray cuts down the clean-up time afterwards. Heat for about 15 minutes, turn off the grill and allow it to cool. If you have a charcoal grill, line the bowl with aluminum foil. After heating, and once the grill and coals are cool, discard the foil with the coals and ash.

Once the grill has cooled, use a wire brush or even crumbled aluminum foil to scrub away buildup on the grates, and discard any grease from the grease tray. Spray grease-cutting dishwashing detergent on grill and grates, scrub with brush or abrasive pad, then rinse. A repeat may be necessary.

Clean the outside of the grill, using a good stainless steel cleaner; it's important to scrub and polish in the direction of the grain. Make sure all dirt is removed, which can get trapped in the grain.

## COVERING THE GRILL

Invest in a good cover for your appliance; this is especially important if you plan on keeping it outside. Prolonged exposure to the elements can shorten the life of your grill, no matter how high quality it is. Grill covers are a good investment, when you compare their relatively low cost to the price of replacing your grill.

Cover once the barbecue is cool and dry.

## STORING THE GRILL

If you won't be using your barbecue during the winter, unplug your gas from the wall or remove your propane tank. If you have space, we recommend storing the barbecue in your garage or under a covered part of your patio. It is not safe to store propane tanks in the garage; store them outside, off of the ground, and cover.

If you have cast iron grates, it's best to bring them inside. Temperature changes can cause them to crack, and moisture in the air can cause them to rust. It's a good idea to season them before you put them away.

## Preparing Your Outdoor Living Space for Winter

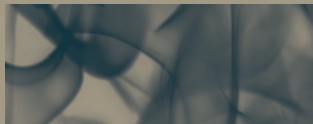

It's also important to prepare and protect the rest of your appliances and equipment, so that everything is ready to use in the spring.

Keep brick oven and fireplace doors closed and cover fire pit openings to prevent snow and ice from building up inside the unit. If snow or ice does build up on a fireplace, fire pit or brick oven, be careful to remove any loose snow or ice, warm the unit up and thaw it slowly.

It's important to protect your pipes, so shut off water to your outdoor kitchen and drain all water lines. Leave the drain valves open.

Turn off all of the power to appliances. Clean the inside of appliances and cabinets and wipe everything down to remove residual moisture. Do not cover outdoor refrigerators or ice makers, which could cause moisture to get trapped and cause electrical damage.

Cover any sinks to prevent debris from settling in the basin. You may want to consider removing the faucet and storing it indoors. If counter tops are made of stone, consider applying a sealant to prevent leaf stains or cracks caused by freezing moisture.

# UNDERSTANDING THE MANUFACTURER'S MANUAL

PORTRAIT  
Valor Fireplaces  
FIND THIS PRODUCT

If you have a new hearth appliance, or you've inherited an existing appliance in a new residence, you'll want to read the manual carefully before operating your appliance to ensure safe and proper operation. If you can't locate the manual you should be able to download a copy from the manufacturer's website. You can find the manufacturer, brand and model on the rating card or plate.

The following items will be of particular importance to you as the owner of the appliance.

**SAFETY**

Read this section carefully as it provides you with important and helpful tips, and recommendations for the safe use of your device.

**RATING LABEL OR CARD**

Essential information such as brand and model are clearly indicated in the manual. This information may be requested by your insurer or municipality, or if you plan to participate in a rebate program. In addition, you will find information on safety and performance certifications, efficiency and emissions ratings, BTUs and serial number, etc. or instructions on where to find this information on the appliance.

**INSTALLATION**

This section explains important information for you and your installer on clearances from combustibles, chimney or venting installation and more. This information will be useful to you or your contractor for planning or finishing after installation.

**OPERATION**

In this section, the manufacturer guides you to the optimal operation of the device, the location and use of the combustion air control lever or dampers and lighting instructions on woodburning appliances, remote control operation and lighting procedures on gas hearth appliances and more.

**SERVICING & MAINTENANCE**

While maintenance instructions and checklists are included in the manual for basic cleaning instructions and for checking the appliance we recommend you have your appliance inspected and serviced annually by a qualified technician. A professional service technician can perform a complete cleaning and inspection giving you piece of mind.

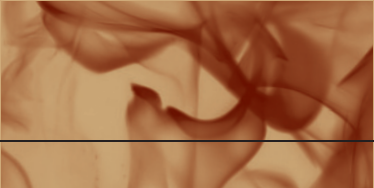

**LISTS OF REPLACEMENT PARTS**

In this section you will find a complete list of replacement parts. All you need to do is contact your specialty hearth retailer if you need to have a part replaced.

**WARRANTIES**

This section provides information on the manufacturer's warranty, provides instructions for dealing with problems and gives you the procedure to follow to register your device.

*Keep your manual on hand. If you sell your property, do not forget to give it to the new owners.*
